

EK16/EK17 Direct Burial Ground Clamp

Features

- Lay-in feature cuts installation time
- Bronze alloy construction with bronze or stainless steel screws (provided)
- Approved for direct burial in earth and concrete
- Pipe range from 1/2" (12.7 mm) to 1" (25.4 mm)
- Rebar range from #4 (10 mm) to #8 (25 mm)
- Ground rod range from 1/2" (12.7 mm) to 1" (25.4 mm)
- Conductor range from #10 (5.5 mm²) to #2 (25 mm²)
- UL listed

The EK16 and EK17 Direct-Burial Ground Clamps from ERICO are a time-saving, cost-effective versatile product that combines four clamps into one. This unique bronze-alloy grounding clamp with bronze or stainless steel screws consolidates separate rebar clamps, ground rod clamps, waterpipe clamps and direct-burial water pipe clamps into one product, allowing contractors to save room on their trucks and distributors to save room on their shelves. It is ideal for swimming pool grounding, light poles and direct-burial applications in both earth and concrete.

The UL®-listed product works on rebar, water pipe and ground rods. The clamp cuts installation time by allowing the contractor to pre-set the clamp on a piece of rebar or water pipe. After all of the clamps have been set, the ground conductor can then be installed using the clamp's unique "lay-in" feature. Rather than threading the ground wire through a hole to make a continuous loop, just lay the conductor in the channel and tighten the setscrew. It's as easy as that! No more time-consuming threading.

Installation is as simple as 1, 2, 3.

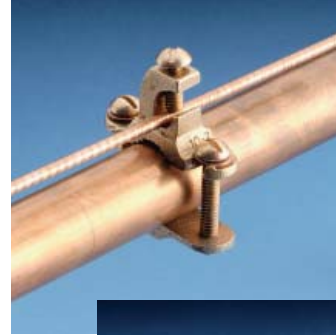

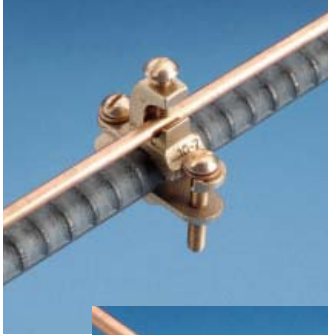

1. Put the clamp on the rebar, water pipe or ground rod.

2. Lay in the conductor.

3. Tighten the setscrew.
